CALIFORNIA WATER SERVICE INFRASTRUCTURE UPGRADE UNDERWAY IN SELMA TO IMPROVE WATER SUPPLY RELIABILITY, FIRE PROTECTION

SELMA, Calif.—California Water Service (Cal Water) has begun a water infrastructure upgrade in Selma that will help strengthen water supply reliability and fire protection for local customers.

The project, which started this week and is expected to be completed in October, includes installation of approximately 2,700 feet of new eight-inch water main. Crews are working to install the new main on Gaither, Logan, Lee, and Stillman streets.

“Water infrastructure improvements like this help Cal Water continue to provide reliable service for customers’ everyday needs, while supporting first responders’ emergency needs to protect the communities we serve,” said Mike Andrada, Cal Water’s Selma District Operations Manager. “We appreciate customers’ patience as we complete work that will help maintain safe, reliable service for customers, support firefighters, and benefit the community for decades to come.”

Crews will perform the majority of work Monday through Friday, between 8 a.m. and 4:30 p.m. Some night or weekend construction may be required, and nearby customers will be notified when scheduled after-hours work is needed. Cal Water crews will make every effort to minimize traffic delays during construction.

After installation, crews will flush the water lines and test water quality samples before connecting individual water services to the new main. Temporary service interruptions will be required when customer services are connected and the new main is placed into service; however, customers will be notified before any planned shutdowns.

Press Release

Temporary asphalt will be applied until permanent paving is completed, which can be up to 30 days after project completion. This waiting period allows the trench to fully compact, helping provide a smoother road surface.

The project is part of Cal Water's ongoing commitment to responsibly invest in and maintain critical water infrastructure. Proactive improvements such as this help reduce future service interruptions, enhance fire protection, and continue providing safe, clean, reliable drinking water to the community.

About California Water Service

California Water Service provides high-quality, reliable water utility services to about 25,000 people through more than 6,400 service connections in Selma, and more than 2 million people statewide through 500,000 service connections. Cal Water's purpose is to enhance the quality of life for customers and communities. To do so, it invests responsibly in water and wastewater infrastructure, sustainability initiatives, and community well-being. The company's 1,200 employees live by a set of strong core values and share a commitment to protecting the planet, caring for people, and operating with the utmost integrity. The utility, commemorating a century of service this year, has been named one of "America's Most Responsible Companies" and one of the "World's Most Trustworthy Companies" by *Newsweek*, a USA Top Workplace, and a Great Place to Work®.
